EDUCATION

California State University, East Bay

Master of Science in Computer Science

Aug 2024 – May 2026

Hayward, CA

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, C, C++, SQL, Bash

Frontend: React, HTML/CSS, REST APIs, GraphQL

Backend & Systems: Node.js, FastAPI, Apache Spark, Kafka, ETL Pipelines

Databases: PostgreSQL, MySQL, MongoDB, Redis

Cloud & DevOps: AWS (Glue, Athena, Lambda, S3, CDK), Docker, Kubernetes, Terraform, CI/CD

AI & Tools: PyTorch, RAG, LangChain, FAISS, MCP, Claude Code, Cursor, Git, Linux

WORK EXPERIENCE

California State University, East Bay

Graduate Research Assistant – Applied ML & Robotics

Oct 2024 – Present

Hayward, CA

- Cut inference latency by 38% on a real-time robotic perception system by rewriting the critical path with CUDA acceleration on NVIDIA Jetson; built telemetry dashboards with log visualization and filters reducing fault diagnosis time by 2x.

Amazon Web Services (AWS) – Aurora

Software Development Engineer Intern

Jun 2025 – Aug 2025

Seattle, WA

- Designed and shipped a distributed telemetry pipeline ingesting 4–6 TB/hour of Aurora logs through AWS Glue, S3, Lambda, and Athena, reducing manual analysis time by 90% with zero downtime.
- Built a schema-agnostic extraction system in PySpark handling 40–50 dynamic fields with dual-format output (Parquet + Ion Binary); cut Athena query costs by 75% through partition projection and Zstandard compression.
- Integrated MCP-based agentic tools enabling natural language querying over production telemetry, accelerating team velocity by 40% and expanding access to non-technical stakeholders.

Intellect Design Arena

Software Engineer Intern

Aug 2024 – Jan 2025

Remote

- Applied Generative AI and LangChain to develop internal models for data interpretation, designing evaluation metrics to assess model performance and effectiveness.
- Fine-tuned models to align with business requirements, translating technical outputs into actionable insights and improving data analysis workflows.

Cloud Counselage Pvt. Ltd

Software Developer

Jul 2023 – Jun 2024

Pune, India

- Built and shipped a full-stack React and Node.js application with RESTful APIs and PostgreSQL backend supporting 200+ concurrent users, with unit test suites and CI/CD via GitHub Actions.
- Optimized SQL queries and ETL pipelines over 500+ records, reducing data processing time by 60% and surfacing results through interactive analytics dashboards.

Defense Research & Development Organization (DRDO)

Software Engineer Intern

May 2023 – Jul 2023

Hyderabad, India

- Increased throughput by 20% under 10k+ parallel requests via async I/O and connection pooling in Node.js and C++; reduced production incidents by 40% through structured logging and automated test pipelines.

PROJECTS

Trust-Aware Enterprise RAG QA System | *Python, FastAPI, React, FAISS, Docker, AWS*

- Built a full-stack Q&A system where users query internal documents in plain English and receive answers with citations and confidence scores; deployed on AWS with pod autoscaling, validated at 100+ concurrent users with a 22% accuracy improvement via hybrid dense-sparse search.

Mobile Stair Detection for Blind Navigation | *C++, Python, YOLOv8, Android NDK, CUDA*

- Resolved a real-time constraint by quantizing YOLOv8 and rewriting the inference engine in C++ with Android NDK, cutting latency from 600ms to sub-200ms; improved low-light accuracy by 18% via IMU sensor fusion.

LEADERSHIP

Girl Up – United Nations Foundation

Head of Research & Documentation

2020 – 2023

Remote

- Coordinated 15+ cross-university STEM programs reaching 500+ students, building an AI/ML curriculum from scratch that tripled workshop attendance over two years.
